F.5 Biology Field Trip Study Programme

On 8 October 2026, our F.5 Biology students participated in the Senior Secondary Biology Field Study Programme, “Bioblitz”, organised by the Ho Koon Nature Education cum Astronomical Centre (sponsored by Sik Sik Yuen).

During the field trip to Ha Fa Shan, students conducted ecological investigations using various techniques, including habitat survey, belt transect walk, quadrat study, active search, and point count, to record the diversity and distribution of organisms in different habitats. Students also observed the morphologies and ecological adaptations of different organisms and investigated ecological phenomena such as camouflage, mimicry, parasitism, and mutualism, thereby gaining a deeper understanding of the relationships among organisms and between organisms and their environment. After completing the fieldwork, each group organised and analysed the collected data and presented their findings.

This field study not only enhanced students’ understanding of biodiversity and ecosystems, but also strengthened their observation, analytical, and scientific inquiry skills while fostering respect for life and appreciation of nature.
