

Success in the 1st Space Seed Planting Scheme: Students Awarded Silver Medal

We are delighted to announce that 5C Fok Wing Tung, Yuen Yuk Ying, 5D Lam Ming Xin, Leung Hoi Ting, and 5E Lo Wing Yiu Chelsea represented our school in The 1st Space Seed Planting Scheme, and they were awarded the Silver Medal for the cultivation of vegetables, the Silver Medal for the cultivation of flowers, and Merits for their presentation.

The scheme, organised by the Alumni Association of the Chinese University Education Faculty, provided space seeds for the participants to cultivate various vegetables and flowers, including cucumbers, tomatoes, and torch flowers, within our school campus. These space seeds had been carried by Chinese spacecraft and travelled to space, where they underwent mutations due to various radiation exposure. Upon returning to Earth, the mutated seeds propagated and continued to produce new space seeds.

Our students successfully cultivated these space seeds and conducted scientific investigations into their growth and development. They are currently in the process of building a greenhouse to further cultivate the space seeds and explore methods to cultivate them under extreme weather conditions within our school campus.

Congratulations to our students for their impressive achievements in this innovative project.
