

Geography Field Trips:

A Central Conservation and Revitalization Field Trip

A Geographical Field Trip to Sai Kung

To significantly enrich the learning journey of our Geography students and cultivate a profound understanding of Hong Kong's dynamic urban development and natural environment, while simultaneously deepening their subject knowledge and appreciation, our Form Four and Form Five Geography students enthusiastically participated in two field trips:

1. A Central Conservation and Revitalization Field Trip on April 25, 2025

This engaging excursion provided invaluable firsthand experience as students explored key sites within Central, including Tai Kwun, PMQ (Police Married Quarters), Wing Lee Street, and the Central Market. Through these immersive visits, they gained critical insights into the rich history and multifaceted development of Hong Kong's Central district, and crucially developed a nuanced understanding of the vital importance of both environmental and heritage conservation.

2. A Geographical Field Trip to Sai Kung on May 14, 2025

During this immersive experience, the students visited the Hong Kong UNESCO Global Geopark Volcano Discovery Centre and conducted fieldwork on Sharp Island. Through these activities, they gained valuable insights into Hong Kong's geological history, its diverse array of rocks and minerals, and the critical importance of environmental conservation.

These trips made truly enriching and intellectually stimulating experiences.
