

F.4 Geography Field Study at the HKFYG Jockey Club Organic Farm

On May 14, 2026, our Secondary Four Geography students visited the HKFYG Jockey Club Organic Farm for a field study designed to complement the senior secondary curriculum. The activity aimed to deepen their understanding of organic farming and sustainable agriculture through first-hand experience.

The visit began with an introduction to the core principles of organic farming and eco-friendly agricultural practices. Students then toured the greenhouse and farmland, observing a diverse range of crops, including bitter gourds, houttuynia, tomatoes, watermelons, and cacti. Engaging their senses by smelling organic fertilizer and closely examining plant growth allowed students to truly connect with natural farming processes.

During the hands-on session, students eagerly took part in farming tasks like harvesting crops and weeding. They also encountered various insects, learning firsthand about the importance of biodiversity and coexisting with nature. Despite heavy rain, the event proceeded smoothly inside the greenhouse.

Ultimately, the field study provided a rewarding, hands-on experience. Students walked away with a deeper appreciation for sustainable living and a stronger understanding of the relationship between humans and the environment.
