

F.5 Biology Field Trip at Chuen Lung

On April 30, 2026, our Form 5 Biology students visited Chuen Lung for a field trip focusing on the freshwater stream ecosystem. This experience provided them with valuable opportunities to explore nature firsthand and gain deeper insights into ecological relationships.

Students carried out water sampling, quadrat studies, and active searches at different stream sites, recording species abundance and ecological functions. They also performed water quality tests in the laboratory and observed microorganisms. The day concluded with data processing and group presentations, where students shared their findings.

This field study enabled students to apply scientific inquiry methods in a real-world environment, strengthening their skills in observation, analysis, and problem-solving. Their active participation truly reflected the spirit of self-directed learning and respect for nature.
